CS2 Q4 DOCUMENTATION OF PROGRESS

These are the added features from the previous code in 3rd quarter

- Add to the loop the choice to be batch officer [insert number] or student

PSHS EVC A...
/storage/emulate...

PSHS EVC ANNOUNCEMENT SYSTEM.py* new* PSH

```python
st.title("PSHS Announcement System")

menu = st.selectbox("Menu", ["Login", "Sign Up", "Check Account"])

# SIGN UP
if menu == "Sign Up":
    st.subheader("Create Account")

    email = st.text_input("Email")
    password = st.text_input("Password", type="password")
    role = st.selectbox("Role", ["student", "admin"])

    if role == "student":
        grade_section = st.selectbox("Grade & Section", sections)
        student_type = st.selectbox("Type", ["student", "batch officer-1", "batch officer-2"])
    else:
        advisor_sections = st.multiselect("Advisory Sections", sections)
        advises_ala = st.selectbox("Do you
```

- Added to the loop the ability to choose your position in an ALA / As well as whether or not an admin is an adviser of an ALA

PSHS EVC ANNOUNCEMENT SYSTEM.py* new* PSH

```
        student_type = st.selectbox("Type", ["student", "batch officer-1", "batch officer-2"])
    else:
        advisor_sections = st.multiselect("Advisory Sections", sections)
        advises_ala = st.selectbox("Do you advise an ALA?", ["No", "Yes"])
        if advises_ala == "Yes":
            ala_choice_admin = st.selectbox("ALA", ALAs)
        else:
            ala_choice_admin = None

    ala = st.selectbox("Choose ALA", ALAs)
    position = st.selectbox("Position", ["Member", "President"])

    if st.button("Sign Up"):
        if email in st.session_state["users"]:
            st.error("User already exists")
        else:
            st.session_state["users"][email] = {
                "password": password,
                "role": role,
```

- Added ability to comment (typing and submitting a comment)

```
126
127         if i not in st.
session_state["comments"]:
128             st.session_state["comments"][i] =
[]
129
130         comment = st.
text_input("Comment", key=str(i))
131
132         if st.button("Submit", key="btn" +
str(i)):
133             st.session_state["comments"][i].
append(comment)
134
135         for c in st.
session_state["comments"][i]:
136             st.write("-", c)
137
138         st.write("---")
```

Note: The code must be uploaded to streamlit to work
